Bromhexine

(Bisolvon (c,d)) POM-V

- **Formulations**

Oral: 10 mg/g powder.

- **Action**

A bronchial secretolytic that disrupts the structure of acid mucopolysaccharide fibres in mucoid sputum and produces a less viscous mucus, which is easier to expectorate.

- **Use**
    - Mucolytic activity could aid the management of respiratory disease.
- **DOSES**
    - **Dogs** Mucolysis: 2 mg/kg p.o. q12h.
    - **Cats** Mucolysis: 1 mg/kg p.o. q24h.
